

Hey There!!! Thanks for downloading the London Telephone Booth paper model.  
If you have never paper modeled before, don't worry!! It's fairly simple ( depending on how complex your model is) just follow these instructions, there are plenty of other paper models out on the internet you just have to look for them! (These instructions are NOT universal; the supplies list CAN be universal but nothing else)

These are the instructions on how to fold and make the paper telephone booth

The pieces are at the end of this packet

**WHEN PUTTING PAPER IN YOUR PRINTER FOR THIS PACKET IT'S STRONGLY RECOMMENDED IN THIS ORDER:**

White Printer Paper  
White Printer Paper  
Cardstock

Before we start, you'll need:

Glue, (Elmer's will work but tacky glue will do best), remember, A DOT IS A LOT

Scissors, if you have regular scissors, they'll work fine but if you have craft scissors (or the pedicure/manicure scissors) try and use those for smaller cuts

Exacto knife of some sort, these are nice for Creasing edges if your working with card stock, and making fine cuts, but be sure to be extra careful with it!

OPTIONAL: Ruler, if you're working with the Exacto knife, this will be extra handy when you're cutting for straight edges

OPTIONAL: a placemat of some sort that can withstand cuts ( I.E.: cardboard), this is handy if your working with an Exacto knife so you don't cut whatever your working on and if its big enough so you don't get glue on where your working or so its easier to find small pieces

OPTIONAL: Paintbrush (toothpick will work also), this will help you spread glue on the grey tabs and smaller spots

### STEP ONE:

Once you have printed out this model, cut out all the pieces and sort them into sections (phone booth and phone)

### STEP TWO:

With the Exacto knife cut out windows (the white on the walls that are in the window holes) (still cut these out if you didn't print the transparency version)

**IF YOU PRINTED THE TRANSPARENCY:** Carefully cut out the window panes and glue the edges on the inside behind the window holes (as one piece) so you can't see the edges, but when you look thru it, it looks like a window

Flip it over and run the Exacto knife gently over the creases where you will fold the walls

**STEP THREE:** This will be the harder part, the phone.

Fold all the grey tabs straight up (not laying down parallel with the paper or on it) on all the black phone parts, Put a little glue on each tab and spread it evenly on the tab. Put the front of the phone face down on whatever your working take the sides ( the two long black pieces with the grey lines going horizontally across some spots, one of them has a tab) and fold them on the little grey lines so they look like the picture below this step ( pic 1) when you look at it from the side and put them on ( **IMPORTANT!!!!!!**: when putting them on with the face of the phone upside down the side **WITH** the tab goes on the Right **WHEN YOUR LOOKING AT THE PHONE FACE FLIPPED OVER**, glue the big tab onto the phone and the little tab onto the side, for the one on the left side both big and little tabs go onto the side of the phone) when putting on the back ( the black silhouette of the face of the phone) put glue on all of the tabs and carefully and gently lower it so all the sides touch the tab, then put a pencil inside of the phone ( so far) and secure all of the tabs by pushing them together with your finger on the outside and pencil on the inside, if any of the grey tabs on the bottom got pushed in pull them back out into their original position and glue the last little black square on the bottom. Put some glue on the back of the phone and glue it to the inside of any wall of the phone booth

pic 1

#### STEP FOUR:

On the Phone Booth Walls, fold the grey tabs so they are flat like the floor on the bottom, and straight like a wall for the one connected TO the wall, put glue on the long tab on the wall and make the box

#### STEP FIVE:

Put glue on the tabs on the bottom and stick the bottom piece to them, secure the bond the same way you did with the phone back and you now have yourself your own personal phone booth!!! CONGRAGULATIONS!!

#### OPTIONAL STEP:

Curve the roof piece once it's cut out and glue the tabs to the inside of one of the arches to make the roof

Roof is  
OPTION  
-AL
